Title	<b>Can I Save That?</b> Treatment Planning in Advanced Periodontitis and Peri-implantitis Cases
Presenter	Dr Andre Bendyk BDS, FRACDS, FPFA
Precis	This masterclass will focus on decision making challenges experienced in general dental practice when patients present with a compromised dentition exhibiting advanced periodontal bone loss. With the aid of multiple clinical cases Andre will discuss the rationale and criteria behind decisions to treat periodontally, or alternatively extract and replace.
By the end of this masterclass participants will:	<ul style="list-style-type: none"><li>• Understand the periodontal and restorative variables which influence tooth prognosis and the extent to which they do so.</li><li>• Develop a greater understanding of the benefits along with risks and limitations of implant replacement options.</li><li>• Appreciate treatment protocols for initial treatment and then long term maintenance of both periodontally compromised dentitions and implant borne prostheses.</li><li>• Increase their knowledge in the increasingly common and technically problematic area of managing fixtures with peri-implantitis.</li></ul>
